EXECUTIVE SUMMARY

Software Engineering Manager with 20+ years in regulated product development, including 7+ years at GE HealthCare and 2+ years at Omnicell leading cross-functional medical device software teams under FDA/IEC 62304/QMS requirements. Proven track record in end-to-end product delivery from concept to production, roadmap execution, team development, and stakeholder alignment across global organizations. Experienced in driving technical strategy while managing people, processes, and quality at scale.

PROFESSIONAL EXPERIENCE

Omnicell — Software Engineering Manager

Nov 2022 – Present | Beijing, China

- **Product Delivery:** Own end-to-end delivery of regulated medical device products (Color Touch, MedChill, AWS Syringe Label), driving roadmap planning, technical direction, release execution, and risk management across concurrent product lines.
- **Team Leadership:** Lead and develop a team of software engineers — setting goals, conducting performance reviews, coaching for growth, and making staffing decisions including hiring and succession planning.
- **Cross-Functional Coordination:** Serve as single point of ownership for software commitments, collaborating with Product Management, Program, Hardware, Firmware, QA, and Manufacturing to ensure alignment and on-time delivery.
- **Technical Strategy:** Drive technical decision-making on architecture and prioritization; independently established local development/test environment for next-generation product platform (Alto/Titan), enabling the Beijing team to contribute to new product development.
- **Stakeholder Management:** Represent software team in planning forums with US-based senior leadership; communicate status, risks, and mitigation plans; build and maintain relationships across geographically distributed teams.
- **Quality & Compliance:** Ensure all software deliverables meet FDA regulatory standards and QMS requirements; lead verification activities and release processes under quality management system.

Key Achievements:

- Delivered multiple complex regulated software releases on schedule with stable quality, maintaining predictable delivery cadence across 3 concurrent product lines.
- Optimized cross-team collaboration processes, reducing delivery bottlenecks and improving release predictability.
- Established risk mitigation and resource allocation processes that improved release stability; proactively identified and resolved critical technical escalations (e.g., hardware sensing issues, security architecture defects) requiring cross-disciplinary judgment.

GE HealthCare — Staff Software Engineer / Technical Lead

Apr 2015 – Oct 2022 | Beijing, China

- **Technical Leadership:** Led architecture and delivery for medical imaging systems (C-Arm X-ray, OEC One), including requirement analysis, system design, implementation, technical review, and full project lifecycle management.
- **Global Team Coordination:** Coordinated international engineering teams (Beijing & Bangalore) to resolve issues, align schedules, and manage cross-site project risks — effectively functioning as technical project lead.
- **People Development:** Mentored engineers across multiple teams to improve technical skills, problem-solving ability, and delivery efficiency; recognized as a go-to technical leader within the organization.
- **Product Development:** Drove features from concept through verification and release under GE's quality management system, collaborating with mechanical, electrical, and systems engineering teams on integrated medical device products.

Key Achievements:

- OEC One VAS: Architected Cine Playback, Reference Image Hold, and Digital Pen features; received GE President Award; published patent for Reference Image Hold.
- C-Arm X-ray: Delivered dose calibration, collimator, and image calibration features; led integration of external image control panel — collaborating across software, hardware, and firmware teams.
- EA3 Enterprise Authentication: Designed cross-team solution architecture; built cybersecurity threat model; coordinated multi-site delivery for enterprise-wide security infrastructure.

IBA (Ion Beam Applications) — Software Engineer

Jul 2006 – Mar 2015 | Belgium / Beijing

- Developed TRCS desktop applications (Java) and web applications (Ruby on Rails) for radiation therapy systems in a regulated medical environment.
- Implemented automated testing frameworks and CI pipelines; managed releases, testing, and documentation under quality system requirements.

AIT — Software Engineer

Feb 2004 – Jun 2006 | Beijing, China

- Researched and implemented ISO/ITU-T/IEC/ICAO protocols for ATN routers and AMHS systems; designed front-backend protocols in C/Java.

EDUCATION

Beijing Normal University — B.Sc. in Computer Science and Technology, 2000–2004

CERTIFICATIONS

- PMP Certified (2019)
- Certified Scrum Master (CSM, 2019)
- ISTQB Advanced Test Manager & Analyst

TECHNICAL EXPERTISE

Languages & Platforms: Java, C/C++, Python, Ruby, Shell, HTML/CSS/JS, AngularJS, Node.js, Android

Architecture & Design: OOAD, design patterns, system architecture, medical imaging, hardware/software co-design

Tools & Processes: Gradle, CI/CD (Jenkins, Sonar), Git/SVN/Perforce, automated testing, Agile/Scrum

Regulatory & Quality: FDA 21 CFR Part 820, IEC 62304, QMS, risk management, V&V, software release under quality system

Management: Roadmap planning, cross-functional coordination, resource allocation, risk mitigation, talent development, stakeholder management

LANGUAGES

Chinese (Native) | English (Fluent, working proficiency) | French (A2)
